Cybersecurity Services for the Finance Industry

Watkins Consulting

Servicing the Financial Community

Watkins Consulting has been providing guidance and support to the Financial Community for over two decades. We have guided our clients through numerous financial events, including supporting the RTC through the savings and loan crisis, the GSEs during the mortgage crisis, and the FDIC through the recent banking crisis. As Financial Institutions are increasingly facing the growing crisis of Cyber Crimes, Watkins Consulting is positioned to help your business meet this challenge.

Advances in Information Technology, Financial Mobility and related services have shaped today's financial services industry. These advances mean efficiency, convenience and connectivity, but to the Financial Community, it also increases risk. Watkins Consulting is teaming with IT professionals and Cybersecurity specialists to proactively identify vulnerable components and design solutions that holistically protect data by securing the network and its endpoints.

To better help our clients evolve to overcome Cyber Risk, Watkins Consulting has developed a Cybersecurity practice. This practice integrates our 25 years in the banking industry with the expertise of several technology firms to provide financial institutions with current, meaningful guidance and the latest digital tools to help mitigate the risks associated with regulatory compliance and Cyber Crime.

Watkins Consulting Expertise

Regulatory Compliance

Watkins Consulting can help a financial institution develop a strategic and effective approach to regulatory compliance. With our expertise, Watkins Consulting solutions will be efficient, cost-effective and relevant over time.

Risk Assessment and Management

Watkins Consulting can help identify and understand events that could negatively impact your institution then map the probability and severity of each event. We can help your organization define and implement controls and processes to effectively manage Cybersecurity risks.

Business Continuity

Watkins Consulting can help your organization plan and prepare for Cyber Threats before they occur. We will help establish a customized course of action designed to minimize the impact of external or internal Cybersecurity breaches on business operations.

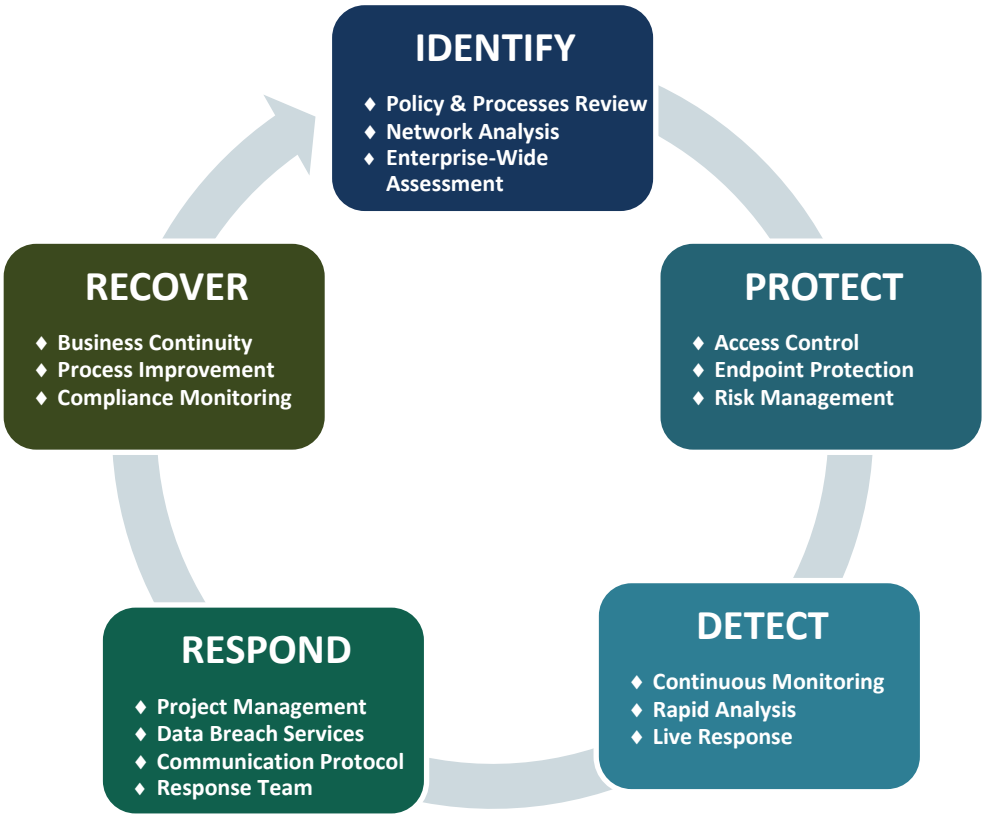
Information Security

Watkins Consulting can provide sophisticated, state-of-the-art technical controls for end point protection, network threat detection and penetration testing to help protect the digital information that extends throughout your business. We will ensure every access point's risk is assessed, documented and controlled.

CYBERSECURITY EXPERTISE

Watkins Consulting is collaborating with several well-established Cybersecurity technology partners to offer a complete suite of Cybersecurity and Risk Mitigation products and services. With our proven Project Leadership and Regulatory Expertise, our team will provide financial institutions with current, meaningful guidance and the latest digital tools to help mitigate the risks associated with regulatory compliance, risk management and Cyber Crime.

CYBERSECURITY PARADIGM



TECHNOLOGY PARTNERSHIP

Watkins Consulting utilizes years of skill and expertise in order to develop and implement real-world solutions through collaboration with leading technology partners. Watkins Consulting and our strategic partners are ready to assist with proactive solutions including evaluation of Cyber Readiness, interpretation of proposed regulations, FFIEC threat intelligence and corporate governance. In the event a Cyber Threat occurs, the Watkins team can help restore business operations and guard against future incidents.
